1. The 3 ft. and 4 ft. units requires 2 circuits. Total Amps for the 5 and 6 ft. units includes 4.8 Amps for the condensate evaporator.
2. Refrigeration System is designed so air will flow front to rear. Unobstructed air flow must be maintained to ensure unit performance and maintain warranty.
3. RPI Merchandiser is designed for use in stores where ambient temperatures and humidity do not exceed 75 Degrees Fahrenheit and 55% R.H. Locate away from direct sunlight, rapid air currents and extreme temperature changes. Exposure to air currents from ceiling fans, air conditioning diffusers, ovens, etc. will disrupt the case air curtain and refrigerated zone. Refrigerated Displays are designed to maintain pre-chilled products. Adding or loading warm products above 41 Degrees Fahrenheit can affect the temperature in the entire cabinet. RPI in line with its policy to continually improve its products reserves the right to change materials and specifications without notice.
